Topic: DIGITAL LITERACY BASICS FOR FIRST-TIME INTERNET USERS FROM SMALL TOWNS

BRANCH:CSE(AIML)

SCHOOL:SCAI

SUBJECT:Digital literacy

SUB Teacher: Prof Kannan

****PROJECT REPORT****

In my project, I used Canva to design a presentation on Digital Literacy Basics for First-Time Internet Users from Small Towns. Canva made it easy to create a clean and visually appealing report with organized slides, icons, and simple text. My design mainly focuses on explaining what digital literacy is, why it is important, and how beginners can safely use the internet. I also included sections on useful digital tools like Google, Gmail, and YouTube, along with safe internet practices such as using strong passwords and avoiding unknown links. Another part of my design highlights the idea of maintaining a professional online presence.

One thing I found a bit difficult was deciding how to keep the information simple yet informative, especially for beginners who may not be very familiar with technology. At the same time, I found it interesting to learn how small habits, like verifying information or protecting personal data, can make a big difference in online safety. Overall, this project helped me understand digital awareness better while improving my design skills.
